

TootSweet 24% Sucrose Solution helps calm and soothe babies in distress and during painful procedures, while protecting against bacterial contamination.

Now there's a safe, convenient way to deliver sucrose solution to your babies – **TootSweet 24% sucrose solution.**

- Baby-appropriate preservatives prevent bacterial growth, no refrigeration required
- 0.5ml, 1ml and 2ml Twist-Tip vials
- Two-year shelf life reduces cost, inventory hassles and waste
- Less waste and spills with Twist-Tip vials
- Single dose, single patient use
- New purple vial – purple is becoming a standard to indicate oral use
- Economical and convenient ... two-year shelf life!

Convenient Twist-Tip vials, administer just a drop at a time!

With TootSweet 24% Sucrose Solution, just a couple of drops on a pacifier or the tip of the tongue a few minutes before a painful procedure, is sufficient.

Keep babies safe and save your hospital money with easy-to-use TootSweet!

Sucrose is a proven, effective method of helping to calm and soothe babies. It is also an ideal medium to grow bugs! Contamination can occur from airborne bacteria, contact with oral flora from re-dipped pacifiers or mucosal contact with oral syringes. Independent studies found non-preserved 24% sucrose became highly contaminated (53 large colonies, and small colonies too numerous to count) with bacteria and mold in a matter of hours after contact with a pacifier used by an infant. (Copy of report available on request.)

Does your sucrose pass the tests for USP preservative safety effectiveness?

Tootsweet's formulation of preservatives has been tested in accordance with USP Preservative Effectiveness Tests (27 NF 22 2004). The test results meet current USP criteria for Antimicrobial Preservative Effectiveness. ISO certified Toxikon Testing Laboratory separately inoculated 20ml aliquots of TootSweet with 1.0×10^6 of the following organisms: *Aspergillus nigar*, *Candida albicans*, *Escherichia coli*, *Pseudomonas aeruginosa* and *Staphylococcus aureus*. The test results met current USP criteria for Antimicrobial Preservative Effectiveness Test. (Copy of report available on request.)

The FIRST sucrose solution that's guaranteed bacteria and mold-free!

Tootsweet is the first sucrose solution that we know of to meet these standards. That means with TootSweet you can be sure your newborns and fragile preemies are not exposed to potentially harmful sucrose-borne bacteria. TootSweet's preservatives are found in Ora-Sweet®, Gentamicin, Caffeine Citrate, and other products commonly administered to preemies and full-term babies.

Instructions for use

Tootsweet has a two-year shelf life. TootSweet may be administered orally with Twist-Tip vials. Vials are single dose, single-patient use. Always follow your hospital protocols for sucrose use. Just a couple of drops on a pacifier or on the tip of the tongue, a few minutes before a painful procedure, is sufficient.

TootSweet in convenient Twist-Tip vials

Clinicians told us they wanted a convenient way to administer sucrose for heel sticks and other procedures. The Twist-Tip Vials are perfect when you want a small amount of sucrose, when you're pressed for time or when babies are in transport and a cup would be unstable and messy. The smaller dose size means less waste when compared with cups. Each drop is approximately 40µ (microliters). You can lay the vial on its side without dripping for easy re-application to the same baby during the same procedure.

Ordering Information

Using TootSweet and NeatNick together gives comfort to your babies and convenience for your clinicians. TootSweet is available in bulk or individually bagged packaging. **TootSweet and NeatNick are Latex-free, DEHP-free and BPA-free.** For a product trial or questions, please contact Natus customer service at 1-800-303-0306.
